

## Release Notes

### Oni

Yocto (Zeus 3.0, Poky 22.0) October 2019

#### v7.0.0

*Release Date: 2020-08-05*

- Platform 5.1.25

### Mara

Yocto (Warrior 2.7, Poky 21.0) April 2019

#### v6.0.5

*Release Date: 2020-06-17*

#### v6.0.1

*Release Date: 2020-02-21*

- Platform 5.1.20
- Added Platform 5.1.19
- Printer support for Epson TM-T88V
- Disabled gRPC calls
- Added i965 video chipset on Lenovo units

#### v6.0.0

*Release Date: 2020-01-24*

- Platform 5.1.18
- Added multi display support
- Added redundant image name to application install stream
- Added `addCursor` and `removeCursor`
- `WiFiWatchdog` defaults to `disabled`

### Archon

Yocto (Thud 2.6, Poky 20.0) Nov 2018

#### v5.3.6

*Release Date: 2020-02-12*

- Platform 5.1.18
- Added record extension for xserver.
- Added libraries to support a proximity sensor
- Fixed `init-install-efi.sh` for nvme disk install.
- Added `max-concurrent-downloads: 1` to docker.
- Added ath10k driver work around.

- Added kernel fragments for ath10k.
- Fixing install bug for disks that aren't first in the chain.
- Enabling intel hd audio modules.
- `WiFiWatchdog` defaults to `enabled`

### **v5.3.5**

*Release Date: 2020-01-17*

- Platform 5.1.17
- Enabled installing applications on slow networks

### **v5.3.4**

*Release Date: 2020-01-16*

- Platform 5.1.16
- Fix for nvme disk install.

### **v5.3.3**

*Release Date: 2020-01-08*

- Platform 5.1.14
- Added snd-hda-intel to Kernel

### **v5.3.2**

*Release Date: 2019-10-15*

- Platform 5.1.14
- Added serial usb device support
- Added dreset utility for docker packages
- Added Imagemagik
- Added Google Cloud SDK.

### **v5.3.1**

*Release Date: 2019-08-29*

- Platform 5.1.12
- Updates to default-app layout
- Added WifiWatchdog
- Added Google Cloud storage of OakOS images

### **v5.3.0**

*Release Date: 2019-07-25*

- Platform 5.1.11
- Added local gRPC Rest Services

## **v5.2.2**

*Release Date: 2019-07-19*

- Platform 5.1.10
- Added Static IP for WiFi

## **v5.2.1**

*Release Date: 2019-05-15*

- Platform 5.1.7
- Added vPro chip sets to the kernel
- Added support for newer i915 video chipsets

## **Baphomet**

Yocto (Sumo 2.5, Poky 19.0) April 2018

## **v5.0.7**

*Release Date: 2019-03-22*

- Platform 5.1.3

## **v5.0.6**

*Release Date: 2019-03-18*

- Platform 5.1.3

## **v5.0.5**

*Release Date: 2019-03-13*

- Platform 5.1.2
- `Host/PowerOff` method now shuts down the machine immediately
- Fixed bugs around `Application/Install` not reporting back the correct status of ongoing progress

## **v5.0.4**

*Release Date: 2018-12-28*

- Platform 5.0.1
- Fix bug where boot time was exceptionally long due low entropy generation

## **v5.0.3**

*Release Date: 2018-12-27*

- Platform 5.0.1

- Minor OS cleanup and organizational changes

## **v5.0.2**

*Release Date: 2018-12-17*

- Platform 5.0.1
- Fix Docker daemon storage location back to volatile storage
- Improved remote updating functionality

## **v5.0.1**

*Release Date: 2018-12-05*

- Platform 5.0.1
- Fix bug where networking may be break during first boot only
- Upgrade [Platform to version 5.0.1](#)
- Removed obsolete Protobuf messages
- Documentation cleanup

## **v5.0.0**

*Release Date: 2018-11-18*

- Platform 5.0.0

**WARNING** Starting with this version, OakOS can only be installed on computers that support [TPM 2.0](#).

## **Pyro**

### **v4.1.4 Beta**

*Release Date: 2018-10-18*

- Platform 4.3.9
- Add [TPM 2.0](#) support
- Add [ApplicationDefinition.DockerService.assets](#) field for specifying asset files for application Docker containers
- Upgrade [Docker Engine to version 18.06.1](#) for stability and long-term feature support
- Upgrade [Docker Compose to version 1.22.0](#) for stability and long-term feature support
- Improve first-boot to work without internet connection
- Improve boot process stability and speed
- Fixed fatal bug in [Application.Logs](#) RPC
- Remove `_oak._tcp` mDNS advertisement and resolution due to reported security concerns
- Remove Platform support for Oak Lighting Controllers, webcams, and payment services; this functionality is now available as [application components](#)

**\*\*INFO:** There are no release notes for earlier versions of OakOS.
