

DeviceScanListenerInterface.java

```
class DeviceScanListenerInterface
```

- Receives the results when discovering devices using the Device Scanner.

```
void scanStarted()
```

```
void deviceFound(String identifier, PSDKDeviceInformation deviceInformation)
```

```
void deviceLost(String identifier)
```

should be removed from the list.

```
void scanEnded(int statusCode, String message)
```

- The scan has ended. If the status code is non-zero, then the scan ended with an error.
