

## ScannerStateEvent.java

```
class ScannerStateEvent
```

- Scanner State Event Handler

```
String getMessage()
```

- A user-readable message. This message may not be localized, in which case the type field should be used for determining a localized

```
String getType()
```

This will generally be SUCCESS for a status of 0, and contain a different type for other errors.

```
int getStatus()
```

- Get the status for this particular event. A status of 0 means success, any other status is a failure.

```
static final String SCANNER_CONFIGURED
```

```
static final String SCANNER_STOPPED
```
