

VFIScannerDataEvent.h

INNERDATARECEIVED

```
class VFIScannerDataEvent : public NSObject
```

- Scanner Data Event Handler

```
virtual nullable NSString * getMessage ()
```

- A user-readable message. This message may not be localized, in which case the type field should be used for determining a localized

```
virtual nullable NSString * getType ()
```

Generally be SUCCESS for a status of 0, and contain a different type for other errors.

```
virtual int32_t getStatus()
```

A status of 0 means success, any other status is a failure.

```
virtual nonnull NSString * getDataAsString ()
```

```
virtual nonnull NSData * getDataAsBinary ()
```

```
virtual VFIScannerBarcodeFormatEnum getFormat()
```

- Get scannerFormat returned from successful scan.
