Barclay Card

The barclay card processor is used for processing transactions with Barclaycard Acquiring. It has to be configured with a `merchant_id` in order to identify the merchant to Barclaycard when processing transactions.

Configuration

A processor can be configured through the API:

```
{
"configuration": {
"_type": "card_barclay_card",
"merchant_id": "string",
},
"name": "Test Processor Barclay Card",
"organisation": "string"
}
```

[Or created through the UI](#).

Customer

The `billing.postal_code` field for UK customers is not allowed to have more than 5 digits.

Currency

The Barclay Card connection can only be used with GBP [accounts](#).
