

LoyaltyData.hpp

```
class LoyaltyData
```

- Allows to convert various offers and promotions to format that can be applied to payment

```
virtual LoyaltyType getType() const = 0
```

```
virtual std::shared_ptr<Promotion> getAsPromotion() const = 0
```

- Access Promotion values, will return empty optional if LoyaltyType does not match APR_PROMOTION

```
static std::shared_ptr<LoyaltyData> createFromPromotion(const std::shared_ptr<Promotion> &promotion)
```

- Create LoyaltyData from Promotion
