

PsdkInitializationConstants.hpp

```
struct PsdkInitializationConstants
```

- Various keys and values that can be used during initialization. Additional keys and values can be found in the PosInformation, PsdkDeviceInformation, and TransactionManager classes.

```
static std::string const NETWORK_CONFIGURATION_KEY
```

defaults to NETWORK_CONFIGURATION_DYNAMIC_VALUE.

```
static std::string const NETWORK_CONFIGURATION_DYNAMIC_VALUE
```

- The network is configured to dynamic IP addresses, which means the library will scan the network to locate the device with the

```
static std::string const NETWORK_CONFIGURATION_STATIC_VALUE
```

- The network is configured with static IP addresses, which means this library will attempt to connect with the remembered IP address for the device.

```
static std::string const NETWORK_CONFIGURATION_SERVICE_DISCOVERY_VALUE
```

- The network is configured with service discovery, which means this library will attempt to discover all the terminals in the local network.
