

TokenType.hpp

```
namespaceverifone_sdk
```

```
enumTokenType
```

```
ANALYTICS
```

Used for analytics/identifying the account. Cannot be used for payments.

```
REUSE
```

- A token to be reused for payments, using just the token value for reuse. This token is never format-preserving, instead it uses a UUID.

```
REUSE_WITH_SCHEME
```

- A token to be reused for payments when the scheme is provided. This token can be format-preserving, depending on the tokenization service.

```
TRANSACTION
```

Used to this particular transaction.

```
NETWORK
```

- Token supplied by the network.

```
constexpr std::string_view toString(constTokenType &arg)
```
