

## TransactionManagerState.hpp

```
namespace verifone_sdk
```

```
enum TransactionManagerState
```

```
UNKNOWN
```

Unknown or otherwise unrecognized. This will rarely happen.

```
NOT_LOGGED_IN
```

Not logged in. There is not currently a login session active, which may or may not be a problem.

```
LOGGING_IN
```

Logging in initiated and is currently being attempted.

```
LOGGED_IN
```

Logged in and was accepted.

```
SESSION_CLOSED
```

Session closed.

```
SESSION_OPENING
```

Session opening being opened.

```
SESSION_OPEN
```

Session open. The user already has basket items or even payments processed.

```
PAYMENT_PROCESSING
```

Payment processing which may or may not require further interaction from the customer or cashier.

```
CONNECTION_RECOVERING
```

- The connection is currently being recovered, no commands can be currently sent to the terminal. If an Abort command is received the recovery process will be aborted.

```
AWAITING_TERMINAL
```

- Waiting for the terminal to complete its command or expecting user interaction

```
constexpr std::string_view toString(const TransactionManagerState &arg)
```
