Automatic Setup

After <u>installing</u> the Verifone Payment Module into your PrestaShop admin, you will need to configure the correct credentials that will associate it to your Verifone account.

Click on **Configure** to add your information (you can find all the details in your Verifone Central account).

Payment		
Verifone	Verifone v3.0.0 - by Verifone	Verifone safe payment solutions
1	Bank transfer v2.1.1 - by PrestaShop	Accept wire payments by displaying
	Payments by check v2.0.5 - by PrestaShop	This module allows you to accept pa
	PrestaShop Checkout v2.20.1 - by PrestaShop	Provide the most commonly used p manage all your sales in a centralize

Plugin Setup

The **Auto Setup Tool** pop-up will be displayed automatically, if this is your first time trying to configure the Verifone settings. If you already did the configuration, you can always access the tool as indicated below:

Account settings

Enter the User ID and API Key, then press on Continue. Wait until a success or error message is displayed.

You can use a Verifone test mode environment to test your integration by clicking on the **Sandbox** option (for this, you will need to have an account set up in the test environment). If the *Sandbox* option is selected, you will need to use the information from your test account (user ID, API key).

If you wish to change the integration environment, you will need to return to this page by clicking the **Configure** button on the app in your PrestaShop admin, then Auto Setup Tool and update the API Key and User ID associated with the Verifone Account with the ones corresponding to the selected environment.

- User ID: The ID of the user that generated the <u>API key</u> in <u>Verifone Central</u>. You can find this information in your Verifone Central account, under *Profile ? API Keys*.
- API Key: The value of the API Key you created in Verifone Central, under the user icon > API keys > Create API key.
- Verifone account region: The region in which your Verifone account is created. Check your Verifone Central access URL if in doubt.

If the successful message displays, then the configuration is done. We recommend checking all tabs to verify all expected payment methods are enabled and clicking a final time on **Update settings**.

Two failed messages can be displayed:

- Invalid credentials. Make sure you enter right credential/environment and try again!: You must check if both the API Key and User ID are correctly entered, and the environment is properly chosen. If you are unsure what is your environment, contact your Verifone representative.
- Account could not be auto-configured, manual configuration is required: Follow the steps from the Manual setup documentation.
