

ContentType doxydoc

namespace VerifoneSdk

enum class ContentType

enumerator HTML

- HTML format of the display/message content, used when sending content to be displayed to the customer or handling requests to the cashier.

enumerator TEXT

- Simple text format of the display/message content, used when sending content to be displayed to the customer or handling requests to the cashier.

enumerator PREDEFINED

- Uses one of the constants defined in PredefinedReferenceId or a custom value pre-configured on the terminal for this estate.
- This is only used when the POS requests to display text on the terminal, not when the terminal requests text to be displayed on the POS.
