

DeviceVitalsInformationEvent.doxydoc

```
class DeviceVitalsInformationEvent
```

```
const VerifoneSdk::OptionalDeviceVitals *DeviceVitals  
    :DeviceVitals.
```

```
const System::String *EventId  
    :EventId. The event id as provided from the originating event.
```

```
const System::String *Message  
    :Message. A user-readable message. In which case the type field should be used for determining a localized message.
```

```
const System::String *SessionId  
    :SessionId. The session which triggered this event.
```

```
const Int32 Status  
    :Status. Get the status for this particular event.
```

```
const VerifoneSdk::StatusInformation StatusInformation  
    :StatusInformation.
```

```
const System::String *Type  
    :Type. The type of status.  
    • This will generally be SUCCESS for a status of 0, and contain a different type for other errors.
```

```
static System::String *EVENT_TYPE
```

```
    :EVENT_TYPE. The event type.
```
