Updated: 20-May-2025

Device Setup

This section of the document, describes the details of setting up the device for SCA integration. The device provided should already have all the necessary software and configuration in place to start integration.

This section describes the details of ensuring the device has appropriate configuration. Refer to section [Supported Devices](#) for devices supported.

Hardware

The Verifone Hardware shipped for demo and evaluation should already have all the necessary cables and power adapters.

Software

The Verifone Hardware shipped for demo and evaluation should also have all the necessary software and configuration required for SCA integration.

This section takes you through a preliminary assessment on the software to ensure you have received the right software and configuration.
