Updated: 12-Sep-2025

SdiLanguage Class Reference

```
#include <sdi_language.h>
```

Public Member Functions

	SdiLanguage ()
	SdiLanguage (unsigned char languageId)
unsigned char	getLanguageId ()
void	setLanguageId (unsigned char languageId)
void	selectLanguage (unsigned char *rsp, unsigned short *rspSize)

Data Fields

unsigned char [trxLanguageId](#)

Constructor & Destructor Documentation

[?](#) [SdiLanguage\(\)](#) [1/2]

[SdiLanguage](#) ()

default constructor

[?](#) [SdiLanguage\(\)](#) [2/2]

[SdiLanguage](#) (unsigned char *languageId*) explicit

constructor with predefined language id

Parameters

languageId preset of language id

Member Function Documentation

[?](#) getLanguageId()

unsigned char getLanguageId ()

get language id

Returns

language id

[?](#) selectLanguage()

void selectLanguage (unsigned char * *rsp*,
 unsigned short * *rspSize*
)

select language from response

Parameters

rsp response

rspSize size of response

[?](#) setLanguageId()

void setLanguageId (unsigned char *languageId*)

set language id

Parameters

languageId language id to set

Field Documentation

[?](#) trxLanguageId_

unsigned char trxLanguageId_
