

## Checkout

### Overview

Checkout is an end-to-end solution that supports accepting payments securely hosted by Verifone. You can configure Checkout to accept card payments, as well as alternative payment methods through the same page. PCI-compliant card payments can be accepted through the checkout as a Hosted Payments Page (HPP), or as an iFrame.

Read [Accepting payments](#) to start your integration.

### Demo

The screenshot displays a Verifone checkout interface. At the top left is the Verifone logo, and at the top right is the total amount, €119.99. Below this, the order details are listed: Reference (ORDER-1234), Descriptor (SNEAKERS DELUXE CO.), and Customer (John). The main section is a credit card payment form with fields for Card number, Expiry (MM/YY), and CVV. A prominent blue button labeled 'Pay €119.99' is centered below the form. Underneath the button, it states 'Secure payments provided by Verifone'. In the bottom right corner, there is a language dropdown menu currently set to 'English'.
