

OakOS Dashboard API

Connecting to Your Device Through the OakOS Dashboard API

For this section you will need to download and install Postman onto your local machine.

Once you have Postman installed locally you can import our API into Postman. To do so simply click the top right button of <u>OakOS API</u> <u>documentation</u> that says "Run in Postman". This will import our API into your Postman App.

● ● ● Postman					
🕂 New 🔻 Import Runner 📑 🔻		My Workspace	- 🛃 Invite		🗧 Upgrade 🔻
Q Filter History Collections	GET Untitled Request + ••• Untitled Request			No Environment	• © ‡
Trash CI	GET - Enter request URL Send				▼ Save ▼
Address Dashboard 44 requests	Params Authorization Headers Body Pre-request Script Tests Cookies Code				
	KEY		VALUE	DESCRIPTION	••• Bulk Edit
	Key		Value	Description	
	Response				
	Hit the Send button to get a response.				
				Build Browse	0 • • •

Now you have a copy of our API and will need to now setup environmental variables in order hook everything up.

In order to use the API you will need to first send your dashboard username and password to the the API. Postman will store a session cookie for that authentication to be used an all other calls in the Dashboard.
