

Webhooks

Why are webhooks important and where can the merchant read more on this?

- Ensure that orders are updated even if the customer abandons the Hosted Payment Page (HPP).
- Synchronize orders with Verifone Central so that any modification done on Verifone is reflected in Magento as well (e.g.: refunds performed on Verifone Central).

More on how to set up notifications and configure webhooks from Verifone Central can be found [here](#).

To set up webhooks for the cart events, follow these steps:

1. Go to *Magento 2* → *Settings* and click on the **Payments** tab.
2. Copy the URL below from the **Payments** tab.

3. Create the notification, as per the [Notifications](#) documentation. On the **Create Notification** page, provide the following information:
 - **Notification name** - Assign a name to label the purpose of your webhook.
 - **Organization(s)** - Select the Merchant Site organization setup with your plugin.
 - **Event types** - Select two events:
 - **Checkout - Transaction succeeded** and
 - **Checkout - Transaction failed**

Event types

✓

- **Delivery Method** - Select **URL Endpoint** and paste the URL copied from step 2.
- **Webhook type** - Select **Event metadata only**.
