

Webhooks

Why are webhooks important and where can the merchant read more on this?

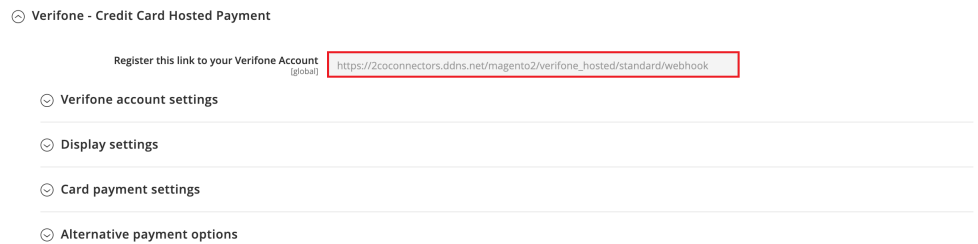

- Ensure that orders are updated even if the customer abandons the Hosted Payment Page (HPP).
- Synchronize orders with Verifone Central so that any modification done on Verifone is reflected in Magento as well (e.g.: refunds performed on Verifone Central).

More on how to set up notifications and configure webhooks from Verifone Central can be found [here](#).

To set up webhooks for the cart events, follow these steps:

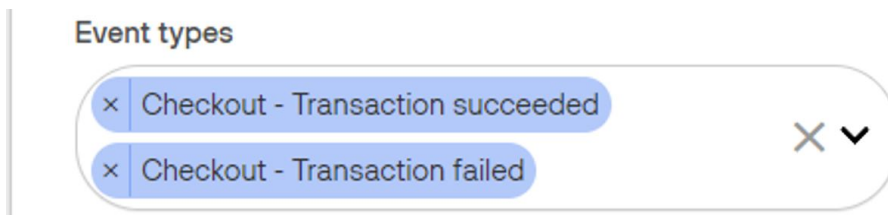

1. Go to *Magento 2* → *Settings* and click on the **Payments** tab.
2. Copy the URL below from the **Payments** tab.

Address Cleansing	
YOTPO	▼
DOTDIGITAL	▼
SERVICES	▼
ADVANCED	▼

The screenshot shows the 'Verifone - Credit Card Hosted Payment' settings page. A red box highlights the URL: `https://zcoconnectors.ddns.net/magento2/verifone_hosted/standard/webhook`. Other settings listed include 'Verifone account settings', 'Display settings', 'Card payment settings', and 'Alternative payment options'.

3. Create the notification, as per the [Notifications](#) documentation. On the **Create Notification** page, provide the following information:
 - **Notification name** - Assign a name to label the purpose of your webhook.
 - **Organization(s)** - Select the Merchant Site organization setup with your plugin.
 - **Event types** - Select two events:
 - **Checkout - Transaction succeeded** and
 - **Checkout - Transaction failed**

The screenshot shows the 'Event types' selection interface. Two event types are selected and highlighted in blue: 'Checkout - Transaction succeeded' and 'Checkout - Transaction failed'. There are 'x' icons to remove each item and a 'v' icon to confirm the selection.

- **Delivery Method** - Select **URL Endpoint** and paste the URL copied from step 2.
- **Webhook type** - Select **Event metadata only**.
