Webhooks

Why are webhooks important and where can the merchant read more on this?

- Ensure that orders are updated even if the customer abandons the Hosted Payment Page (HPP).
- Synchronize orders with Verifone Central so that any modification done on Verifone is reflected in Magento as well (**e.g.**: refunds performed on Verifone Central).

More on how to set up notifications and configure webhooks from Verifone Central can be found here.

To set up webhooks for the cart events, follow these steps:

1. Go to *Magento 2* ? *Settings* and click on the **Payments** tab.

2. Copy the URL below from the **Payments** tab.

   Magneto Copy Link

3. Create the notification, as per the Notifications documentation. On the **Create Notification** page, provide the following information:
   - **Notification name** – Assign a name to label the purpose of your webhook.
   - **Organization(s)** – Select the Merchant Site organization setup with your plugin.

   - **Event types** – Select two events:

     - **Checkout – Transaction succeeded** and
     - **Checkout – Transaction failed**

Event types

- Checkout - Transaction succeeded
- Checkout - Transaction failed

○ **Delivery Method** – Select **URL Endpoint** and paste the URL copied from step 2.
○ **Webhook type** – Select **Event metadata only**.

Delivery method

○ Email address
