

Installation

Compiling Storefront Code

After downloading the package, execute the **npm install** or **yarn install** files in a console. Once this step is performed, execute the **npm run build** or **yarn build** files to compile the storefront code.

Upload Cartridges

Upload the Verifone cartridges to the sandbox using WebDAV client (for example: VS Code, UX Studio for Eclipse, Web SCP). For the SFRA storefront the required cartridges are **bm_verifone**, **int_verifone**, **int_verifone_sfra** and **verifone_sfra_changes**. For the Sitegenesis storefront the required cartridges are **bm_verifone**, **int_verifone**, **int_verifone_sg** and **verifone_sg_changes**.

Setup Cartridge Path

1. Navigate to Business Manager > Administration > Sites > Manage Sites.
2. Select the site you want to edit.
3. Select the **Setting** tab.
4. Add the cartridges to the left side of the cartridge path.
5. For SFRA add **verifone_sfra_changes:int_verifone_sfra:int_verifone**.
6. For Sitegenesis add **verifone_sg_changes:int_verifone_sg:int_verifone**.
7. After configuring the site path, return to Business Manager > Administration > Sites > Manage Sites.
8. Select business manager link.
9. Select the **Setting** tab.
10. Add the **bm_verifone** cartridges to the left side of the cartridge path.

Import Metadata

1. Create a zip archive of the metadata folder located in the package.
2. Go to Business Manager > Administration > Site Development > Site import & export.
3. Upload the metadata zip file using form.
4. Select the uploaded file.
5. Click on the **Import** button.
6. Click on the **Ok** button, when it appears.
7. Wait for import to conclude successfully.

Once the installation is complete, make sure to [configure the Verifone settings](#).

Download the Verifone Link Cartridge
