Using the dashboard API

Requirements

To perform any of the following examples, you must have set up your environmental variables and authenticated to the system.

The documents in this section will give you a greater understanding on how to get information and perform tasks using this API. Tests can be performed and environmental variables can be set in each call's test tab.

Review the OakOS gRPC Protocol Buffers for information to improve the structure.

In this section, review and demonstrate by example how to do `GET` and `POST` information for the following proto buffers and their methods.

Protocol Buffer	Methods
Host	Info Reboot
