What's New In Release Date: October 2025 (R40)

NEW FEATURES AND ENHANCEMENTS

Major Oil Policy

Major Oil Policy is a framework that allows Major Oils to enforce specific configuration settings across their sites. For example, they can mandate that mobile payment is enabled as a method of payment at all locations under their brand.

NOTE

Only certain field(s) will be controlled in a form corresponding to a policy.

Automatic Site Assignment

When an administrator places a new Site or Verifone Commander into a subtree within the hierarchy that is already fully assigned to one or more users, the system will now automatically assign those users to the new Site/Verifone Commander.

Previously, administrators were required to manually assign each site to individual user accounts.

Commercial Fleet Direct

The WEX-OTR and Comdata configurations have been added to Verifone C-Site Management. It allows the Verifone Commander to process Commercial Fleet transactions directly to WEX and Comdata. It will enable customers who do not use an acquirer, but supports commercial fleet transactions, to accept WEX-OTR and Comdata commercial fleet cards.

What's New In Release Date: July 2025 (R39)

NEW FEATURES AND ENHANCEMENTS

VASC Access

The External Access Menu added the Verifone Authorized Service Contractor (VASC) Site Management. A Petro Site Administrator can now assign or unassign a site and features to or from a VASC company. This feature allows Verifone Commanders at those sites to be onboarded with VASC credentials.

Image Upload

Users can upload images for menu items to different areas such as Touch Icons/Buttons and the Welcome screen.

Menu Configuration

The Menu Configuration can now be edited.

What's New In Release Date: April 2025 (R38)

NEW FEATURES

Partner Access

The External Access Menu contains Partner Site Management. A Petro Site Administrator can now assign or unassign a site and features to or from a Partner company.

Brand Transition Management

Sites will be seamlessly added to the Major Oil instance based on the brand identified in the site assets. This feature removes the hassle of manual updates, ensuring the site remains aligned with rebranding.

Deleted Users

If a user is accidentally deleted by the administrator, they can recreate the same email without Verifone Support.

Multi-Site Password Management

Merchant administrators now have the powerful capability to change Verifone Configuration Client user passwords for all sites directly from Verifone C-Site Management. This streamlined process not only saves time, but also, enhances security by allowing for centralized password management. Instead of logging in to each Verifone Commander individually, administrators can efficiently ensure compliance with PCI-related password policies from one convenient location. This upgrade significantly simplifies password administration, making it easier than ever to uphold security standards. It is only available in Verifone Commander 56.01.00 Release.

Replicate Configuration

Seamlessly apply configurations from one site to multiple sites, greatly reducing the workload and maximizing efficiency. The following forms were added as part of Replicate Configuration:

- Fuel (Fuel Configuration and Fuel prices)
- Fuel prices (Fuel prices and Fuel products)
- DCR Configuration
- Touch Screen
- Tipping (Verifone Commander 56.01.00 Release)

Tipping Configuration

The Verifone Commander offers customizable tipping options for sites that sell prepared food, enhancing the customer experience. Tipping prompted on the PIN pad is only configured in Verifone C-Site Management. It is only available in Verifone Commander 56.01.00 Release.

RESOLUTION

Site Management

The site count on the dashboard and page mismatched. This was corrected.

What's New In Release Date: January 2025 (R37)

New Features

1. A new End User License Agreement (EULA) was added. It can be reviewed by clicking on the profile icon in the upper right-hand corner of the screen and selecting "Terms" from the menu.
2. Menu Configuration was added in Site Management. It is currently read-only and is only available in Verifone Commander 56.00.00 Release.
3. Touch Screen Configuration was added in Site Management. It is only available in Verifone Commander 56.00.00 Release.

What's New In Release Date: November 2024 (R36)

New Feature

Terminal ID was added to the Mobile Configuration.

What's New In Release Date: September 2024 (R35)

New Features

1. Payment Operations was added to Verifone C-Site Management > Configuration > Site Management.
2. Mobile Configuration changes that are made on Verifone Commander Configuration Client will now sync with the Verifone C-Site Management.

2. The Retailer Company Name was added for Major Oil View.
3. The Menu Navigation for the Administration menu was restructured by adding User Management sub-menu.

What's New In Release Date: May 2024 (R33)

Replicate Configuration

The ability to replicate configurations (tax rates, Fees, ID Checks etc.) from one site to multiple sites has been added.

What's New In Release Date: April 2024 (R32)

Accounts

Partner Accounts

Petro Partner Accounts are supported to get the T-Log data via an API from C-Site Management.

What's New In Release Date: February 2024

Accounts

1. An account can now have multiple Petro Site Admins and/or Major Oil Admins.
2. Petro Site Admins now have permissions for Access Control and Forecourt meaning that all the forms are accessible for Read and Write.

Administration Hierarchy

When a user expanded the tree structure in the Administration Hierarchy, it took longer than expected to open. An enhancement was made to speed up the page load.

Enterprise Level

1. The user is now able to perform both row-based and table-based operations on the enterprise-level data so that they can easily manage the configurations.
2. The user is now able to create a new Enterprise Configuration from the Enterprise view on the C-Site Management landing page.

Loyalty Site Configuration

The user is now able to edit the Loyalty Site Configurations by directly clicking on a field to edit, rather than needing to click on an Edit button first.

Site Assets

Site ID is now included as part of the Site Assets Page (Requires Commander software release 55.01).

What's New In Release Date: January 2024

Software Versions

The releases (bases) will now be mapped to the forms.

Login/Logout

The ability to send POS screen Login/Logout messages was added. (Requires Commander software release 55.00)

Sales Configuration

The ability to send the Sales Configuration was added. (Requires Commander software release 55.00)

Cloud Configuration Manager

1. The ability to send fuel prices and read only fuel configuration was added. (Requires Commander software release 55.00)
2. The ability to edit and send the item prices from C-Site Management was added. (Requires Commander software release 55.00)

Loyalty

The ability to give the ownership of the loyalty program from Branded oil to Merchant and vice versa and the ability to remove the loyalty program from C-Site Management were added.

What's New In Release Date: November 2023

Release Version

The Release Version will now be displayed on a form in the Configuration > Site Configuration.

Login Link

A link to the login page was added to the self-registration page.

Loyalty Configuration

Loyalty configuration is supported based on the ownership of the program. It requires Release 54.02 version.

Site Creation

If a site does not exist in Verifone C-Site Management during Verifone Commander Onboarding, it will automatically be created.

T-Log Viewer

When the user clicks on the T-Log Viewer in Verifone C-Site Management, the Financial filter is now used by default. Journal or Other are additional filter options.

What's New In Release Date: September 2023

Loyalty

Major Oil Brands can now access the Loyalty Configuration.

POS Configuration

1. The user can now view and send fuel tax exempt and receipt lines data from C-Site Management to the Verifone Commander. This change requires Release 54.01 or higher.
2. The user can now view and send POS security data from C-Site Management to the Verifone Commander. This change requires Release 54.02 or higher.

What's New In Release Date: August 2023

T-Log Viewer

1. T-Log Viewer can now be viewed with one service ID at a time.
2. The T-Log data is now exported in the CSV format.

System

1. The status of the Verifone Commander will update after a connection is restored. It was added in the Verifone Commander Release 54.00.00 software.
2. The Terms and conditions have been changed. The admin must accept site solutions before proceeding with C-Site Management.
3. Last heartbeat will be displayed in Administration > Sites and will not be shown to all onboarded sites.

POS Configuration

The following the forms have been added to configure the store operation from C-Site Management using Verifone Commander Release 54.01.00 software:

- Tax Rates
- Categories
- Department
- ID Checks
- Blue Laws
- MOP
- Fees
- Currencies

Loyalty

The Loyalty Configuration can now be sent to multiple sites from C-Site Management. It was added in the Verifone Commander Release 54.00.00 software.

Site Assets

Vendor name was added as part of the column for the site asset reporting.

Mobile Payment Configuration

1. The Acknowledgment status of the configuration has been added in the Site Configuration. This was added in the Verifone Commander Release 54.00.00 software.
2. The ability has been added to bulk upload of Service ID and Merchant ID numbers for Mobile Payment Configuration.
3. The ability to configure Mobile Payment Configuration for one or more sites and send from C-site management has been added. It is available to Major oil and Retailer and was added in the Verifone Commander Release 53.41.00 software.
