What's New In Release: PCS 1.25.3

Hotfix Release 1.25.3 RC1

These were corrected:

- There was an issue where fuel price updates were incorrectly flagged as pending and applied outdated prices across multiple stores and brands. Fuel prices now update only when requested and reflect the current configured values.
- There was an issue where validation incorrectly required color and label color for the Monitoring button. Validation now correctly skips color checks for Monitoring buttons.
- There was an issue where Menu Configuration changes made in the Verifone Commander Configuration Client were not syncing to Verifone C-Site Management. Menu Configurations now propagate correctly.
- There was an issue where Verifone Self Checkout configuration was not populated in Verifone C-Site Management when the Message 2 text exceeded forty characters. The configuration now loads correctly with longer message text.

What's New In Release: PCS 1.25.2

RESOLUTIONS

Configuration

- There was an issue where the Bypass FEP configuration was not displayed in Verifone C-Site Management after upgrading to Base 57.00.00. The Bypass configuration now loads correctly under Payment Operations > Primary Payment instead of showing "Data not found."
- There was an issue where creating a PLU in Verifone C-Site Management automatically enabled the Foodstamp option. PLUs are now created with only the configuration options explicitly selected, and the Foodstamp setting can be disabled as expected.
- The fuel grade list was not visible under Admin Messages for Commander Payments for Major Oil Accounts. It is now visible.

What's New In Release: PCS 1.25.0

NEW FEATURES AND ENHANCEMENTS

New and Updated Forms

The following new forms have been added to Site Configuration:

- Site Configuration > Store Operations forms: Self-Checkout, Close Lane.
- Site Configuration > Promos and Discounts forms: NAXML Deals and Coupons.
- New Site Configuration > Payment Operations forms: Trigger Pull Settings, EPS Parameters, EMV Settings, Proprietary Fleet, PIN Pad, POS Settings, EPS Prepaid, Full Service Attendant, InComm, Cullinan, Payware Fleet, and Payware Loyalty.
- Updated Site Configuration > Payment Operations > Primary Payment.
- Added new form for Site Configuration > Devices > Cash Recycler. Added new form for Site Configuration for System Settings > NTP Server.

VASC Site Management

Updated VASC Access for Site Feature Control to allow the editing of Payment Operations.
