## Important Information

This is a new version of the Transaction Manager. It has been re-written to use the Microsoft .Net Framework. It is compatible with all the latest Microsoft Operating Systems.

## System Requirements

- Microsoft Windows 10 or later
- Microsoft Windows Server 2016 or later
- .Net Framework 4.8 - All versions of Windows that have been kept up-to-date should already have it installed. If not, then download and install prior to installing the Event Manager. The .Net Framework 4.8 is available at <https://dotnet.microsoft.com/en-us/download/dotnet-framework/net48>

## What's New In Release Version: 3.0.5.2

### ENHANCEMENTS

#### Application

- Filter value drop-down menu now has a blank entry that can be used to delete the selection. It can also be deleted using the delete key.
- Filter value drop-down menus are now properly sorted in ascending order.
- Multiple Department IDs/Names and Category IDs/Names are now all displayed within the cell.

#### SMTCommon 1.0.5.1

Improvements were made in the handling of all-user versus single user installations and shared data versus private data options.

## RESOLUTION

### Application

The filtering mechanism was not displaying transactions that contained multiple items unless the item filtered for was the first one listed. Also, in some cases, filtering would not work at all. These were corrected.

## What's New In Release Version: 3.0.4.2

### ENHANCEMENTS

- When installed for All Users (requires Admin privilege), options are added to the main screen to allow changing the application from using private data folders to using shared folders. With shared folders, all users of a system will share the same information.
- Transaction Viewer filters were modified to match an older application version. Multiple filtering items can now be selected. The filter button no longer functions as a toggle (click to filter, click to unfilter). It now always filters when clicked. To unfilter the display, select 'Show All' on both Trans Types and Extended Criteria, and then click on the filter button.

## RESOLUTION

DOB verified text was missing on the Transaction Viewer while scanning the QR code. This was corrected.

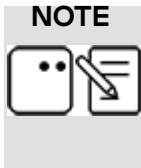

## What's New In Release Version: 3.0.3.3

### RESOLUTIONS

The following issues were corrected:

- Values were not being sorted as numbers.
- Sort was displaying incorrect data.

## What's New In Release Version: 3.0.3.1

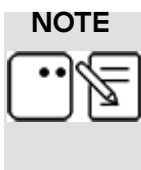

Also, the Common.dll file was updated, but none of the changes affected the Report Navigator.

## What's New In Release Version: 3.0.2.4

### ENHANCEMENTS

Changes were added to support special characters in fields: Site ID, Location ID, and Period ID.

Special characters that are not allowed in folder/file names are replaced with underscore(\_) character.  
Also, the Common.dll file was updated, but none of the changes affected the Report Navigator.

## What's New In Release Version: 3.0.2.1

### ENHANCEMENT

The xslt\details.xsl file was updated to display Age Verification token in the Transaction Details Report.

## What's New In Release Version: 3.0.1.1

### ENHANCEMENT

This is the initial Release of the .Net version.
