

Verifone Commander

Release 55.02.00 Highlights

We're thrilled to announce exciting updates to the latest Verifone Commander software that enhance convenience, streamline operations, and like never before, empower your business.

Discover the notable enhancements:

1 Self-Checkout Enhancements

The Verifone Self-Checkout (SCO) solution just got even better with these exciting new features:

- Portrait mode is now available, allowing you to save valuable counterspace.
- Compatible with industry-leading Zebra USB scanner while maintaining support for Serial Scanners.
- Ability to monitor transaction details directly from your POS while shoppers use SCO.
- Expanded options for customizing welcome screen and banners to showcase your brand.
- Option to add a Tower Light kit for an enhanced customer experience.

2 Age Verification now uses TruAge QR Code

Age Verification for age restricted items is now easier by supporting the TruAge Mobile QR Code IDs as an alternative to physical ID verification.

3 Streamlined checkout with Single MOP

Enable faster checkout with a single method of payment (MOP) button on your POS. No more separate buttons for cash, credit, debit or mobile payments—everything is now handled with one simple, efficient button.

4 Improved Loyalty Programs Support

Support multiple loyalty programs processed through a single loyalty host, both inside and outside, simplifying the payment flow like never before.

5 C-Site Management Enhancements

Some site configuration details are now stored centrally (such as DCR configuration and primary payment configuration), eliminating the need to re-enter this information when the Verifone Commander is re-installed or upgraded.
