Verifone

QUICKER, EASIER SOFTWARE UPGRADES
Verifone Remote Software Delivery (VRSD)

BRINGING SOFTWARE ENHANCEMENTS TO YOU REMOTELY

Verifone customers can now receive software updates to their point of sale system quicker and easier with Verifone Remote Software Delivery (VRSD). VRSD is provided via two unique features, Remote Delivery Framework and Self-Service upgrade. The Remote Delivery Framework delivers the Verifone software packages to each site via broadband connection. The Self Service Upgrade is an unassisted download of new software updates performed at each site.

Verifone RSD Site Requirements

Point of Sale Platform

- Sapphire or Commander
- V950 (configured with Site Service ID and VRSD Overlay)

IP Connectivity

Broadband IP Service

ASM Contract

Current, Active Annual Software Maintenance Contract

SELF SERVICE UPGRADE

Verifone Remote Software Delivery eliminates the need for site visits and manual software upgrades via CD or USB. Now, with VRSD sites can receive updates sooner, easier, and more frequently with the unassisted Self Service Upgrade feature. Self Service Upgrade is an exclusive feature of VRSD which allows software packages that have been remotely delivered to each site, to be installed easily by anyone at the site. The upgrade can be performed at a time that works best for the site manager so minimal disruption to the business will occur. The flexibility and ease of performing Self Service Upgrades allows for a more convenient way to stay up to date with software packages.
